

encoding and decoding a second authorization code on said at least one SAM module using said personal identity code;

data conditioning electronics adapted to descramble said data read out of said mass storage by comparing said first authorization code to said second authorization code; and

an output device for said data.

19. A replay system according to claim 18, further comprising:
a payment system comprising a chip card reader, said payment system adapted to conditional access to a provider of said data using a remote network.

20. A replay system according to claim 19, wherein:
said chip card reader is adapted to a plug-in type PC card in the PCMCIA format.

21. A replay system according to claim 19 or 20, further comprising
a monitoring device adapted to evaluate a certified time stamp read out of said mass storage device.

REMARKS

Claims 1-21 are pending. Claims 1-21 have been amended and have been filed in a timely fashion. Applicant requests the Examiner to enter this Preliminary Amendment prior to examination of the application.
